

ALSPA MV3000 MicroCubicle™ BUYER'S GUIDE

ALSPA MV3000 MicroCubicle™ BUYER'S GUIDE

Basic Drive Modules to 315 kW

Publication No. T1699EN
Issue (08/00)

HOW TO USE THIS BUYER'S GUIDE

Welcome to the ALSPA MV3000 MicroCubicle™ Buyer's Guide. This guide has been designed to assist you in selecting all the items necessary for an ALSPA MV3000 inverter drive application without reference to individual product technical documents.

The inside front cover contains a fold-out Quick Look-Up Selection Chart with page references. This will lead you from a basic drive configuration through to the selection of options for a more sophisticated application.

To assist with listing the equipment you need for each application, the Appendix includes an Equipment List and Price Fill-In Sheet which may be photocopied as required. Please refer to your ALSTOM Power Conversion Sales Office or Representative for Price Lists in your local currency.

A Recommended Spares Lists plus a full list of all documentation is also included for convenience.

HELP! Should you have any problems whatsoever in specifying the necessary items, we have included at the end of this buyer's guide an enquiry sheet which you can fill in and send to us. Fill in as many of the spaces as possible and fax the sheet in to your local ALSTOM Power Conversion Sales Office or representative. You will then be advised of all the items you need.

RELATED DOCUMENTS

ALSPA MV3000 DELTA Buyer's Guide – For inverter drives between 150 to 3600 kW. The ALSPA MV3000 DELTA based inverter's are available in both air and liquid cooled versions. This is available from your ALSTOM Power Conversion Sales Office or Representative.

Variable Speed Drives Price List – This is available from your ALSTOM Power Conversion Sales Office or Representative.

1. Introduction

The ALSPA MV3000 range of variable speed AC drives provides powerful features at an economical price. As standard the, ALSPA MV3000 is a simple to use inverter for general-purpose applications for ratings from 22 kW to 3600 kW. For more advanced applications, open up the parameter menus, add Fieldbus communications, hardware expansion and programming enhancement facilities, and the power of ALSPA MV3000 comes alive. Add to this universal control strategies such as frequency control, closed loop flux vector control and encoderless flux vector control, and ALSPA MV3000 easily manages a vast spectrum of industrial applications. A typical ALSPA MV3000 drive unit is shown with the optional Drive Data Manager™ (Keypad) fitted.

ALSPA MV3000 is available in a number of hardware packages dependent upon rating and cooling method. These are indicated in the table below.

FORM	DESCRIPTION
MicroCubicle™	Fully self-contained inverter drive unit – also available fully packaged
Delta – Air Cooled	Modular inverter building blocks – available in kit form or fully packaged
Delta – Liquid Cooled	Modular inverter building blocks – available in kit form or fully packaged

MicroCubicle™
Ratings up to 315 kW

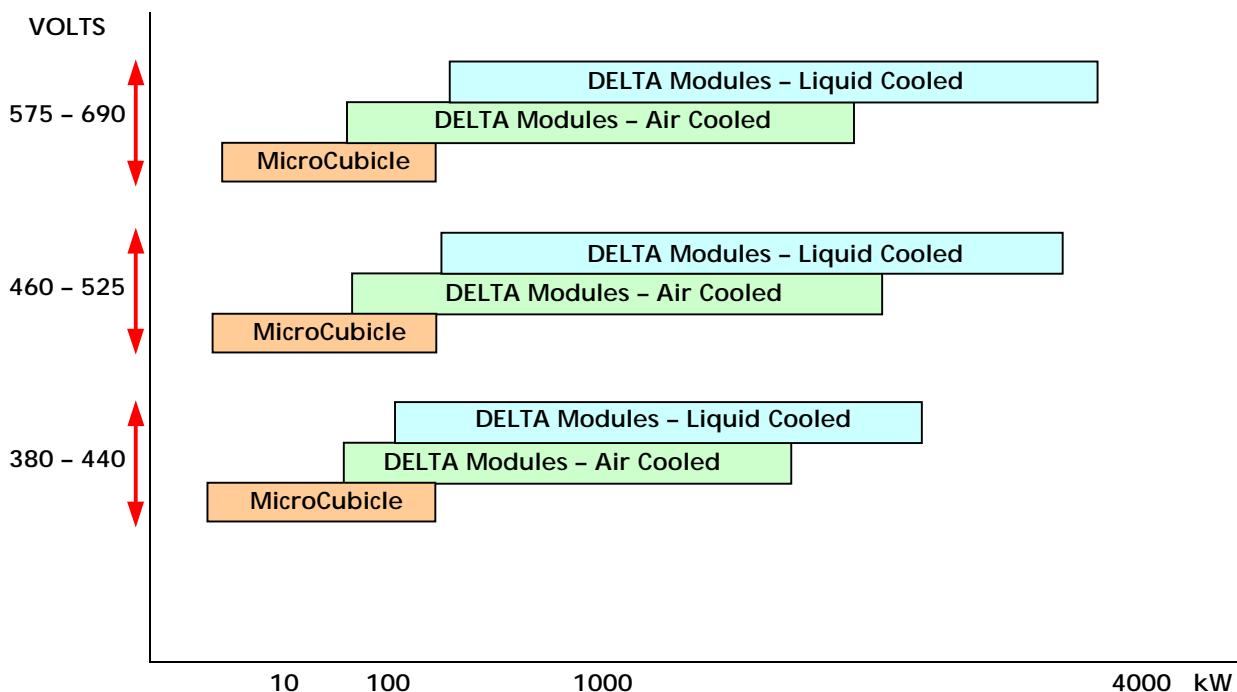

DELTA Modules
Inverter building blocks

Fully Packaged DELTA Inverter
Ratings up to 3600 kW

1. Introduction

All inverters are available in three AC supply voltage ranges as indicated in the following table.

This Buyer's Guide covers only the ALSPA MV3000 MicroCubicle range of inverters up to 315 kW.

Please refer to ALSTOM or the ALSPA MV3000 DELTA Buyer's Guide for details of higher rated inverters.

1.1 The MicroCubicle™

The ALSPA MV3000 MicroCubicle™ combines innovations in design, compactness, power to weight ratio, ease of use and speed of maintenance previously unknown in an AC inverter drive.

A mixture of wide power and voltage supply range, increased functionality and improved usability allow the ALSPA MV3000 to be applied in virtually all types of applications in all corners of the globe.

MicroCubicle™ Overview

- AC Variable Speed Inverter Drive
- 3 Voltage Ranges : 380-440 V, 460-525 V, 575-690V – 50/60 Hz
- Dual Overload 150% Constant Torque, 110% Variable Torque Pump & Fan
- Control Modes : Frequency Control, Open and Closed Loop Flux Vector Control

Mechanical Outline

- Bookcase format
- High packing density
- Space saving
- Dimensions to fit standard cubicles

Expandability

- Front access to withdrawable control module
- Post-sale option fitting e.g. Fieldbus cards
- Fast fit, options slide and click into place

Access and Serviceability

- hinged gate access to power and control sections
- internal components front accessible
- withdrawable modules e.g. controller, DB unit, rectifier
- fast servicing with minimum number of fasteners
- moulded channels to assist cable routing

Built-in Reliability

- intelligent action in the event of adverse process conditions
- extensive protection features
- AC reactor for protection from line transients
- Rugged output bridge withstands DOL
- Long capacitor and fan life

Configuration and Programming

- Easy to use: 3 wire in, 3 wire out: press 'start'!
- Quick start guide for step-by-step easy instructions
- Simple parameter menu for basic applications
- Open further menus for more advanced applications
- Drive Data Manager™ keypad – on drive or handheld
- ALSPA Drive Coach PC based set up tool

Further Features

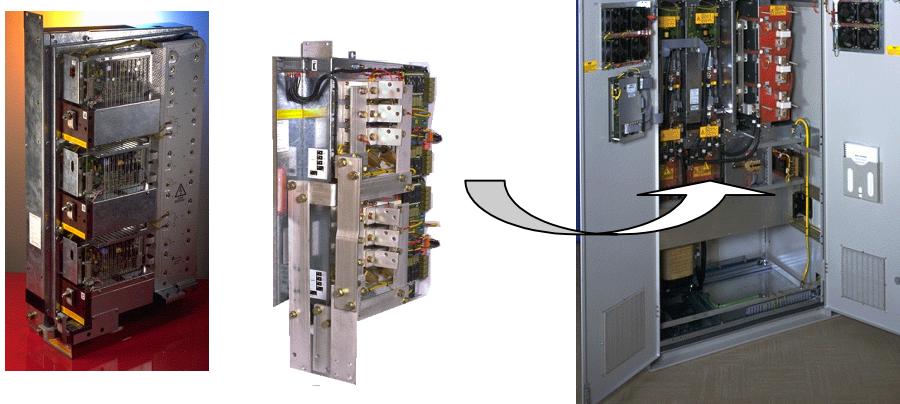

- PID Controller on board
- Skip frequencies
- Energy saving modes
- Speed, torque and position control modes

1.2 The DELTA Concept

The Concept:

For drive ratings above 315 kW ALSPA MV3000 is designed to be fully packaged. To provide flexibility of construction and commonality of components over a wide power range, the 'DELTA' concept was conceived. It is a modular approach to the construction of AC inverter drives where the major drive components have been built into conveniently sized building blocks – called 'DELTA Modules'. A complete inverter drive is constructed using a number of these modules. Further, parallel capability allows higher ratings to be achieved using the same modules.

The Modules:

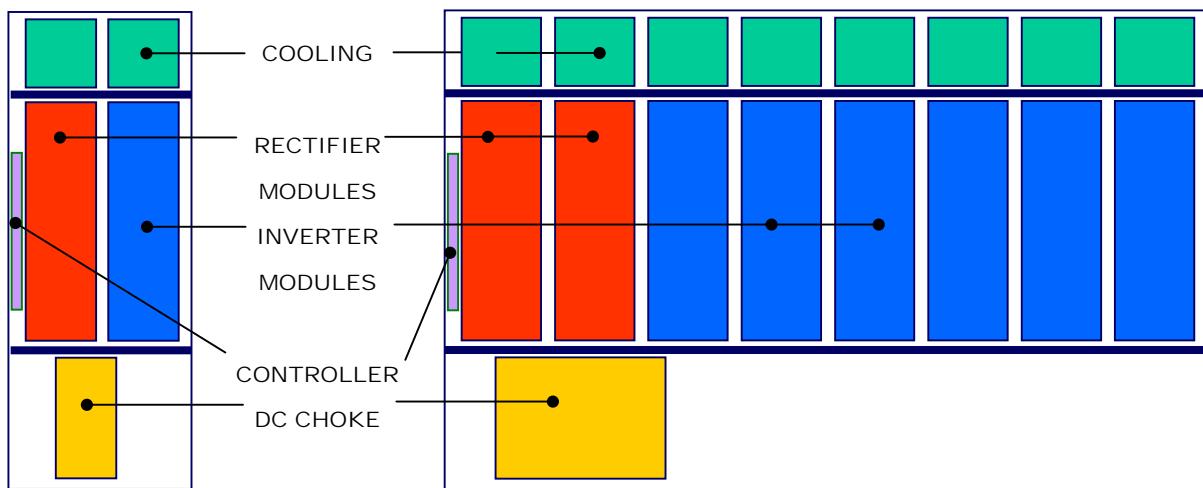

DELTA Inverter Module

DELTA Rectifier Module

Fully Packaged DELTA based inverter

Parallel Capability:

Inverter drives spanning a wide power range can take advantage of common building blocks providing benefits in drive construction, minimisation of spares holding and identical set-up procedure.

We provide everything you need:

To assist the System Builder, we provide all the necessary items to complete the package: the hardware building blocks, typical kit list and schematics, assembly instructions, electrical wiring instructions, full technical specifications and cubicle planning suggestions.

For details of Inverters rated up to 3600 kW, refer to ALSTOM or ALSPA MV3000 'DELTA' Buyer's Guide.

2. Product Overview

2.1 Data Common to all Units

Motor shaft power range	22 kW to 1800 kW (air cooled), Up to 3600 kW (liquid cooled)
Supply Voltage	3 Phase, 380-440, 460-525, 575-690 Volts. Voltage range as selected.
	±10% long term, ±15% for 0.5 to 30 cycles with loss of performance but no trip.
	Negative sequence voltage 3%
	50 Hz, 60 Hz as selected.
	±2% with rate of change ±2% per second
	With earthed/grounded neutral (i.e. TN or TT) or isolated neutral (i.e. IT network). For IT networks, transient suppression (e.g. to UL 1449) and earth fault protection must be provided external to the drive.
Output Overload	Constant Torque: 150% full load current for 60s, giving up to 160% related motor torque at breakaway. Variable Torque: 110% full load current for 60s where selected (see rating tables)
	3 Phase, compensated to give maximum voltage level equal to the supply voltage
	0 - 200 Hz (800 Hz on MicroCubicle™)
Motor Control Type	3 Modes available: Variable Voltage Variable Frequency, Flux Vector without encoder, Flux vector with encoder
Switching Frequency	1.25 kHz default. Programmable up to 7.5 kHz
Enclosure protection	MicroCubicle™: IP20 (NEMA 1). Optional canopy for IP21. DELTA based inverters: IP00 modules. Packaged drives available for higher IP ratings - refer.
Operating - Temperature	0°C to 40°C. Derate output by 2.5% per °C above 40 °C up to 50 °C max.
	Up to 1000m. Derate by 0.73% per additional 100m to a maximum of 2000m.
	5% to 95% relative humidity non-condensing.
	IEC 60721-3-3 Class 3M1 & EN50178
Storage - Temperature	-25°C to 55°C
	5% to 95% relative humidity non-condensing.
Transport - Temperature	-25°C to 70°C
	≤ 95% relative humidity non-condensing.
	IEC 60721-3-2 Class 2M1
Cooling - Method	Forced air cooled, with internal fans.
	Clean, free from dust, condensation and conductive vapours (i.e. pollution degree 2 according to IEC 60664-1 and UL840). If optional dirty air kit is fitted, the power devices can use unfiltered air that does not contain corrosive, conductive or explosive dust or gases.
EMC	Complies with EN61800/IEC61800 Part 2 and Part 3.
CE	CE marked to comply with the European Union Low Voltage Directive 73/23/EEC.
Control sources	Optional Drive Data Manager™ - mounts on drive module, cubicle, or is hand held. Control terminals for remote control (analogue and digital) wiring. Control via Serial Link.
Languages	English, French, German.
Serial communications	RS485, RS232, with MODBUS ASCII/RTU, GEM80 ESP. Drive to drive link. Opt: WorldFIP, PROFIBUS, DeviceNet.
Analogue inputs	2 x 12 bit resolution, +/- 10VDC or +/- 20mA.
Analogue outputs	2 x 12 bit resolution, +/- 10VDC or +/- 20 mA.
Digital inputs	6 configurable, 1 fixed, 10 - 50 VDC
Digital outputs	3 x C/O relays. All configurable.
High Speed Digital I/O	1 x RS422 Programmable as: Frequency input for speed reference or Frequency output of motor speed
Encoder Feedback	4 channel differential line receiver for interface to incremental encoder (A, A*, B, B*, Z, Z*). Max 1 MHz
Performance	Frequency: Resolution: 0.01%, Control Accuracy: 0.1%. Speed: Resolution: 0.01%, Accuracy (absolute) 0.01%

2.5 Standards of Compliance

EC Directives	CE Marked: complies with EN50178 LVD. Complies with EN61800-3 EMC when used and installed as directed.
BS 7671:1992	Requirements for electrical installations. IEE Wiring Regulations. Sixteenth edition. (Related to IEC 60364)
NFPA 70 - 1999	National electrical code, including the safe installation of electrical conductors
IEC 60038:1983	IEC standard voltages
IEC 60417-1:1998	Graphical symbols for use on equipment - Part 1: Overview and application.
IEC 60417-2:1998	Graphical symbols for use on equipment - Part 2: Symbol originals
IEC 60664-1:1992	Insulation co-ordination for equipment within low voltage systems - Part 1: Principles, requirements and tests
IEC 60664-3:1992	Insulation co-ordination for equipment within low voltage systems - Part 3: Use of coatings to achieve insulation co-ordination of printed circuit assemblies
(BS) EN 50178:1998	Electronic equipment for use in power installations. General requirements.
(BS) EN 50082-2:1995	Electromagnetic compatibility. Generic immunity standard. Industrial environment.
(BS) EN 55011:1998 CISPR 11:1999	Industrial, scientific and medical (ISM) radio-frequency equipment - Electromagnetic disturbance characteristics - Limits and methods of measurement
IEC 60065:1998	Audio, video and similar electronic apparatus - Safety requirements
(BS) EN 60068-2-6:1996 IEC 60068-2-6:1995	Environmental testing - Part 2: Tests - Test Fc Vibration (Sinusoidal)
(BS) EN 60073:1997 IEC 60073:1996	Basic and safety principles for man-machine interface, marking and identification - Coding principles for indication devices and actuators
(BS) EN 60146-1-1:1993 IEC 60146-1-1:1991	Semiconductor convertors - General requirements and line commutated convertors - Part 1-1: Specifications of basic requirements
(BS) EN 60204-1:1998 IEC 60204-1:1997	Electrical equipment of industrial machines - Part 1: General requirements
(BS) EN 60529:1992 IEC 60529:1989	Degrees of protection provided by enclosures (IP-Code).
(BS) EN 60721-3-2:1997 IEC 60721-3-2:1997	Classification of environmental conditions - Part 3: Classification of groups of environmental parameters and their severities - Section 2: Transportation
(BS) EN 60721-3-3:1995 IEC 60721-3-3:1994	Classification of environmental conditions - Part 3: Classification of groups of environmental parameters and their severities - Section 3: Stationary use at weather protected locations
IEC 60950:1999	Safety of information technology equipment
IEC 61000-2-2:1990	Electromagnetic compatibility (EMC) - Part 2: Environment - Section 2: Compatibility levels for low-frequency conducted disturbances and signalling in public low-voltage power supply systems
(BS) EN 61000-2-4:1995 IEC 61000-2-4:1994	Electromagnetic compatibility (EMC) - Part 2: Environment - Section 4: Compatibility levels in industrial plants for low-frequency conducted disturbances
(BS) EN 61000-4-2:1995 IEC 61000-4-2:1995	Electromagnetic compatibility (EMC) - Part 4: Testing and measurement techniques - Section 2: Electrostatic discharge immunity test. Basic EMC Publication
(BS) EN 61000-4-3:1997 IEC 61000-4-3:1995	Electromagnetic compatibility (EMC) - Part 4: Testing and measurement techniques - Section 3: Radiated, radio-frequency, electromagnetic field immunity test
(BS) EN 61000-4-4:1995 IEC 61000-4-4:1995	Electromagnetic compatibility (EMC) - Part 4: Testing and measurement techniques - Section 4: Electrical fast transient/burst immunity test. Basic EMC Publication
(BS) EN 61000-4-5:1995 IEC 61000-4-5:1995	Electromagnetic compatibility (EMC) - Part 4: Testing and measurement techniques - Section 5: Surge immunity test
(BS) EN 61136-1:1998 IEC 61136-1:1992	Semiconductor power convertors - Adjustable speed electric drive systems - General requirements - Part 1: Rating specifications, particularly for D.C. motor drives
(BS) EN 61800-1:1998 IEC 61800-1:1997	Adjustable speed electrical power drive systems - Part 1: General requirements - Rating specifications for low voltage adjustable speed D.C. power drive systems
(BS) EN 61800-2:1998 IEC 61800-2:1998	Adjustable speed electrical power drive systems - Part 2: General requirements - Rating specifications for low voltage adjustable frequency AC power drive systems
(BS) EN 61800-3:1997 IEC 61800-3:1996	Adjustable speed electrical power drive systems - Part 3: EMC product standard including specific test methods
ANSI/UL 508C	Power conversion equipment.
UL 840	Insulation co-ordination including clearances and creepage distances.
CAN/CSA C22.2-14:1995	Industrial Control Equipment. Industrial Products.

2. Product Overview

2.6 Drive Performance Data

Frequency –	Resolution	0.01%	
–	Control accuracy	0.1%	
Speed	– Resolution	0.01%	
–	Accuracy (absolute)	0.01%	
	VVVF	ENCODERLESS FLUX VECTOR	FLUX VECTOR WITH ENCODER
Speed Control Range	50 : 1	50 : 1	>1000 : 1
Speed Control Bandwidth	N/A	20 Rad/s	100 Rad/s
Torque Control Bandwidth	< 1 Rad/s	> 500 Rad/s	> 500 Rad/s
Torque Control Accuracy	≤ 10 %	≤ 10 %	≤ 5 %
Speed Control Accuracy	≤ 1 %	≤ 0.5 %	≤ 0.02 %

3. Basic Drive Selection

3.1 General Purpose Selection Flow Chart

In order to match the right inverter to the application, one first needs to establish basic data about the mains electricity supply and also the motor nameplate details.

Mains Electricity Supply	
Mains Supply Voltage:	Volts
Motor Nameplate Details	
Motor Base Voltage:	Volts
Motor Base Frequency:	Hz
Motor Full Load Current:	Amps
Motor Power:	kW
Motor Base Speed:	r/min

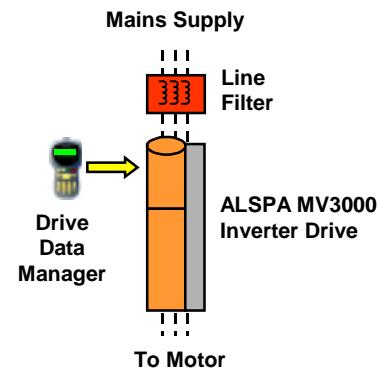

The next step is to categorise the application in order to choose an inverter with the right overload duty to match the application requirements.

In general we distinguish between two types of applications:

- 1) Variable Torque Applications: centrifugal pump/fan loads (110% overload)
- 2) Constant Torque Applications: for all other types of loads (150% overload)

The simplest configuration for such applications comprises three items:

- 1) ALSPA MV3000 AC Inverter Drive
- 2) Line Filter
- 3) Drive Data Manager™ Keypad

Application		
Centrifugal Pump or Fan ?	Yes (1.1 O/L)	No (1.5 O/L)

Supply Voltage Range*
380 – 440 V AC 50 Hz
575 - 690 V AC 50 Hz
460 - 525 V AC 60 Hz
575 – 690 V AC 60 Hz

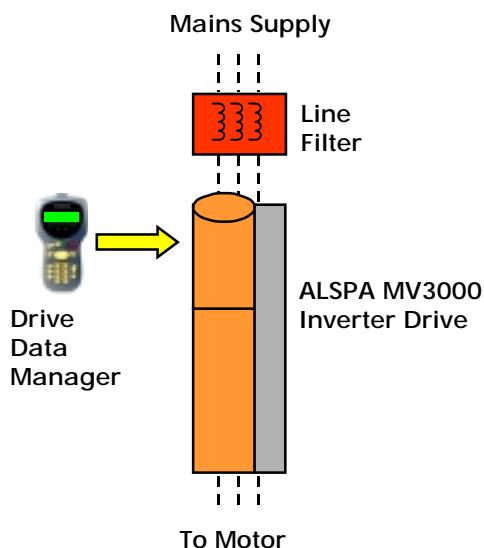

Go To Page	Go To Page
3-2	3-6
3-3	3-7
3-4	3-8
3-5	3-9

* All drives are suitable for 50 and 60 Hz supplies. Typical territorial voltage/frequency ranges shown.

3. Basic Drive Selection

3.1.1 Variable Torque - Pump & Fan - Applications : 380 – 440 V 50 Hz

Variable torque loads generally comprise centrifugal pump and fan applications where 110% of full load current overload is sufficient. Fan fluxing (square law) and economy modes are included to assist with energy saving.

Special Note: If the drive is to be used in a 12 Pulse configuration, then the Input Line Filter is not required if it is supplied from its own dedicated 12 Pulse Supply Transformer. Where a number of drives are supplied from a common 12 pulse transformer, then each drive must have its own Input Line Filter.

(This page intentionally left blank)

4. Extended Applications

Some applications may require the addition of further components to meet the needs of local regulations, system integration, or performance.

The following chart lists situations when further components may be necessary and indicates where the selection rules are to be located.

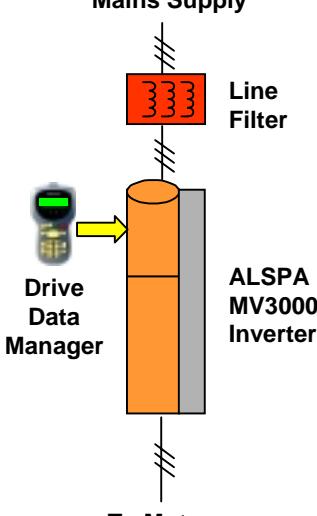

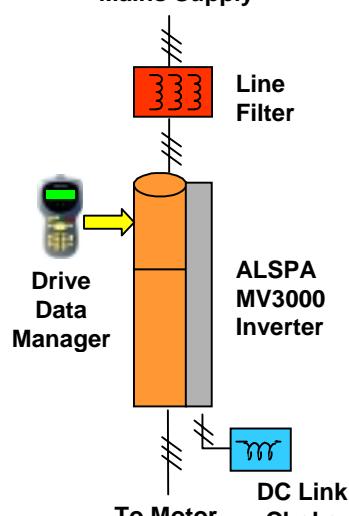

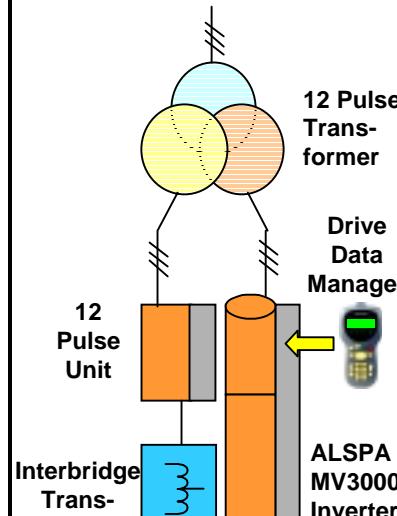

(This page intentionally left blank)

4.1 Low Harmonics

Various configurations are available to progressively reduce harmonic levels to meet site requirements or local regulations. The following table shows harmonic levels for three configurations, beginning with the standard 6 pulse configuration and two other configurations with improved harmonic levels. **Note:** these levels will be affected by existing supply harmonic levels, supply imbalance and supply impedance.

PROGRESSIVELY LOWER HARMONICS

6 Pulse - Standard		6 Pulse - Enhanced		12 Pulse	
Harmonic Order	% of Fund.	Harmonic Order	% of Fund.	Harmonic Order	% of Fund.

Alternative resistor selection

If the braking duty is less than given above, an alternative resistor within the minimum-maximum limits specified may be used. Refer below for calculations.

Calculation Based on Power

Dynamic Braking Resistance $R = \frac{V_{DB}^2}{P_p}$ Ω Where V_{DB} = DB Operating Voltage
 P_p = Peak power during braking

AC Voltage	V_{DB}
400	732
480	846
600/690	1118

Alternatively a lower value of resistor may be used, but not below the specified minimum value.

Calculation based on Inertia

Dynamic Braking Resistance $R = \frac{91.2V_{DB}^2 t_1}{JN_2(N_2 - N_1)}$ Ω

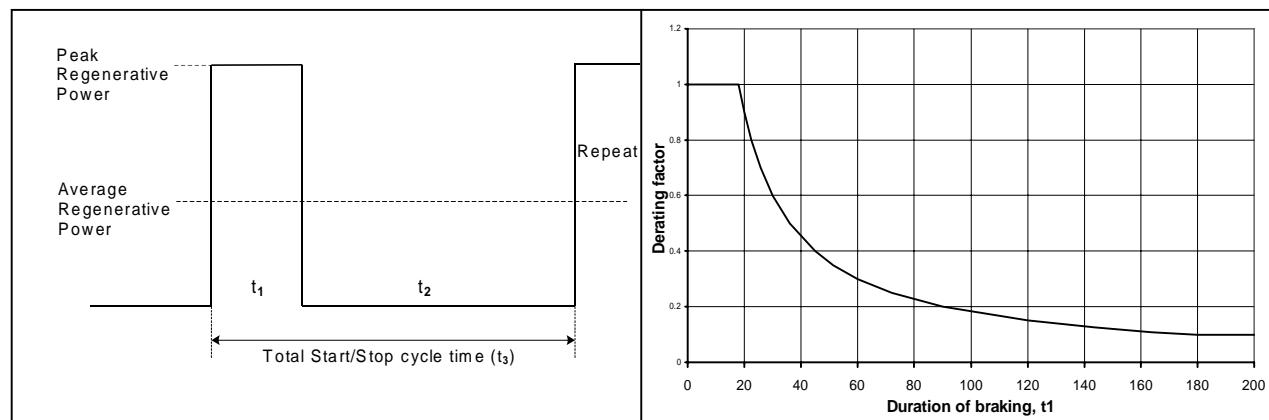

Where V_{DB} = DB Operating Voltage
 J = system inertia (kgm^2)
 t_1 = braking time (seconds)
 N_1 = initial speed r/min
 N_2 = final speed r/min

Note: $J = J_{motor} + (J_{load} \times 1/(\text{gear box ratio})^2)$

If there is no gear box, gear box ratio = 1

Peak Power (at start of braking) = $P_p = \frac{JN_2(N_2 - N_1)}{91.2 t_1}$

Resistor Peak Power Capability and Peak Power Derating

The calculated resistor value should have a peak power capability equal to the power during braking and be able to withstand this power for the braking time t_1 . The calculated resistor value should also have an average power capability given by:

$$\text{Long term average power} = \text{Average power during braking} \times t_1 / t_3$$

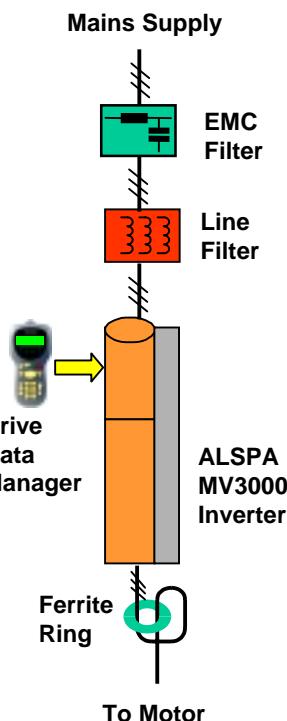

The dynamic braking unit has a 10% duty factor, which corresponds to an 18 second ON time in any 180 second period. If the braking ON time is longer than 18 seconds, the Peak Power must be derated by applying the derating factor indicated by the curve above.

4.3 EMC Filters & Ferrites – 6 Pulse & 6 Pulse Enhanced

EMC filters and ferrites will assist the inverter installation to meet EMC emission requirements. This generally applies when operating in non-industrial environments or when the inverter is installed in the proximity of sensitive equipment.

For 6 Pulse configurations, one EMC filter plus one motor cable ferrite ring will be required to meet EMC emission requirements.

4.5 Fieldbus Communication

4.5.1 WorldFIP Fieldbus

The WorldFIP Fieldbus board may be retrofitted on all ALSPA MV3000 inverter drives. Boards providing a dual redundant WorldFIP Fieldbus are available for 1 Mbit/s and 2.5 Mbit/s operation.

FIP bus arbiter functionality is not supported, and must be provided by another device on the FIP network.

The FIP board is parameterised and controlled using the same parameter interface as for the host drive unit. The board may be configured over the drive's serial link, but not over the FIP link itself.

SPECIFICATION

Fieldbus

- Dual redundant FIP Fieldbus: Options
- 1 Mbit/s
 - 2.5 Mbit/s

Protocol

WorldFIP Profile A, IEC 1158-2 and FIP, NFC 46-603/4

Data Refresh Rate

- Two drive data refresh rates
- fast scan : 10 mS
 - slow scan : 100 mS

Environment

- | | |
|-----------|--|
| Storage | <ul style="list-style-type: none">- Altitude 3000m (max)- Temperature range -25°C to + 70°C- Relative Humidity 5% to 95% non-condensing |
| Transport | <ul style="list-style-type: none">- Altitude 3000m (max)- Relative Humidity ≤ 95% non-condensing- Vibration, drop IEC 60721-3-2 Class 2M1 |
| Operating | <ul style="list-style-type: none">- Altitude 3000m (max)- Temperature range 0°C to +50°C- Relative humidity 5% to 95% non-condensing- Vibration IEC 60721-3-3 Class 3M1 & EN50178 |

Dimensions - 160 mm x 100 mm. Fits internally to the drive unit.

Weight - 140 g

Safety - EN50178 Electronic Equipment for use in power installations

EMC - EN61800-3 / IEC61800-3

Order Codes:

MVS3002-4001	ALSPA MV3000 FIP Board 1 Mbit/s
MVS3002-4002	ALSPA MV3000 FIP Board 2.5 Mbit/s
MVS3002-4010	FIP Cable with moulded on connector 3 m length
8892-4300	FIP Link AC Earth Connection (2 required)

4.5.2 PROFIBUS Fieldbus

The PROFIBUS Fieldbus Coupler may be retrofitted on all ALSPA MV3000 inverter drives and allows connection to a PROFIBUS-DP network.

The PROFIBUS board is parameterised and controlled using the same parameter interface as for the host drive unit. The board may be configured over the drive's serial link, but not over the PROFIBUS link itself.

SPECIFICATION

Fieldbus communication rates:

- 9.6K, 19.2K, 93.75K, 187.5K, 500K, 1.5M bit/s

Protocol

PROFIBUS-DP Field bus protocol to DIN 19245

Data Refresh Rate

10 mS

Data Volume

- | | |
|-------------------------|---|
| Cyclic Channel Receive: | <ul style="list-style-type: none">- 1 control word (16 bit), and 5 reference demands (16 bit)or- 2 control words (16 bit), and 4 reference demands (16 bit) |
|-------------------------|---|

- | | |
|--------------------------|---|
| Cyclic Channel Transmit: | <ul style="list-style-type: none">- 1 status word (16 bit), and 5 monitor values (16 bit) |
|--------------------------|---|

Power Supply

Internal 5V supply. Current consumption : 315 mA.

Environment

- | | |
|-----------|--|
| Storage | <ul style="list-style-type: none">- Altitude 3000m (max)- Temperature range -25°C to + 70°C- Relative Humidity 5% to 95% non-condensing |
| Transport | <ul style="list-style-type: none">- Altitude 3000m (max)- Relative Humidity \leq 95% non-condensing- Vibration, drop IEC 60721-3-2 Class 2M1 |
| Operating | <ul style="list-style-type: none">- Altitude 3000m (max)- Temperature range 0°C to +50°C- Relative humidity 5% to 95% non-condensing- Vibration IEC 60721-3-3 Class 3M1 & EN50178 |

Dimensions - 160 mm x 100 mm. Fits internally to the drive unit.

Weight - 165 g

Safety - EN50178 Electronic Equipment for use in power installations

EMC - EN61800-3 / IEC61800-3

4.6 Programming

4.6.1 Drive Data Manager™

Drive Data Manager™

The Drive Data Manager™ is the keypad programming tool for ALSPA MV3000.

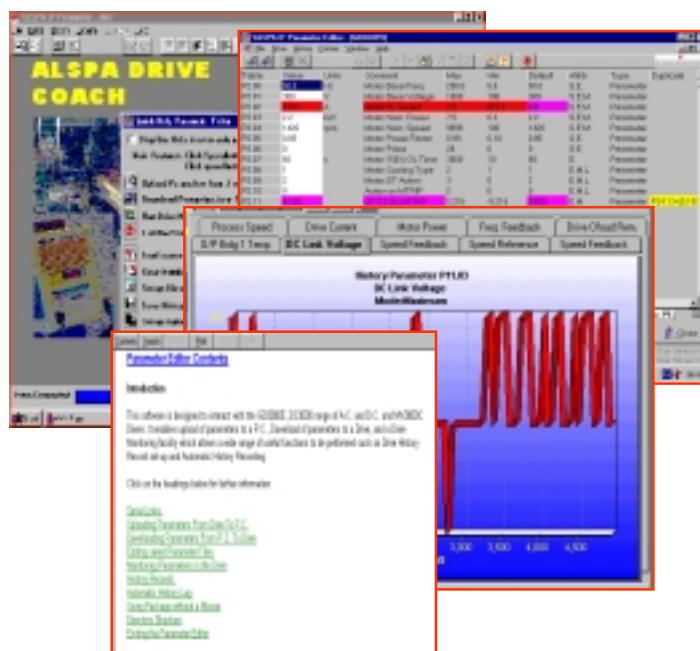

The ergonomically designed unit features:

- parameter editing
- 4 line backlit display
- wide angle, magnified view
- multilingual text display
- telephone style navigation key
 - menu and parameter access
- numeric keys for fast data entry and shortcut parameter access
- versatile to use:
 - mounts directly on drive unit
 - mounted on enclosure
 - handheld
- parameter storage for faster multi-drive commissioning
 - upload/download to/from drive
- on-line 'HELP' key for extra parameter information
- diagnostic help and history record viewing
- optional cable and IP65 seal for enclosure door mounting

Order Codes:

MVS3000-4001	Drive Data Manager™
MVS3001-4001	Drive Data Manager™ Lead 3m and IP65 Door Mounting Kit

4.6.2 ALSPA Drive Coach

ALSPA Drive Coach is a PC based programming tool providing a superior programming and diagnostic viewing environment.

Facilities include:

- drive parameter editing
- upload parameters from drive to PC
- download parameters from PC to drive
- save parameters to disk
- save history record to disk
- view history record
- graphical display of data
- archiving
- Hypertext Help Facility
- Windows™ based

Order Codes:

MVS3004-4001	ALSPA Drive Coach
GDS1009-4001	PC Programming Lead 3m

4.6.3 Demonstration Briefcase

A self-contained demonstration briefcase simulating the complete functionality of the ALSPA MV3000.

Comprising:

- MV3000 Control board
- Drive Data Manager™
- Drive Data Manager™ Lead for handheld use
- Analogue and Digital I/O Control panel
- Built-in 110/240 V power supply with lead
- PC connection cable for use with optional ALSPA Drive Coach
- Power frame simulation

The following facilities are provided:

- Off-line programming & learning
- Full use of ALSPA Drive Coach PC programming package
- Fault simulation
- Diagnostics

The unit allows training of engineering staff and machine operators before actual equipment hands-on. Further, the unit allows development of plant programs or SCADA simulations in a safe development environment.

Order Codes

4. Extended Applications

4.7 Cables, Motors and Encoders

4.7.1 Motor Cables

To avoid EMC problems, the motor cable should be screened (e.g. NYCWY according to VDE 0271 or steel wire armoured) or fully enclosed in metallic trunking. The screen or metallic trunking must be continuous throughout its length and be connected directly to both the drive cabinet and motor.

Outside the drive cabinet the motor cable must be segregated from other cables by at least 300mm (12in)

4.7.2 Motor Insulation

Motors with Insulation Peak Voltage Withstand ratings of 1200 V (400V motors), 1500 V (500V motors) and 2250 V (690 V motors) can be operated with ALSPA MV3000 without risk to the motor winding insulation, for cable lengths up to 500m (1640 ft). Such motors are available from reputable manufacturers, as standard motors up to 500 V and with an enhanced insulation system for voltages greater than 500 V up to 690 V.

For motor cable lengths greater than 500 metres, please refer to ALSTOM.

4.7.3 Encoders

When operating in closed loop flux vector control or position control, encoder feedback is required. Only RS422A type encoders can be used with ALSPA MV3000. A marker pulse is only required when in position control mode.

The MV3000 is equipped with power supplies suitable for two types of encoders:

- 1) Encoders requiring +5 V supply and producing an RS422 output
- 2) Encoders requiring +24 V supply and producing an RS422 output

Note: 24V differential outputs are not compatible. The pulse train must be RS422.

Encoder Resolution

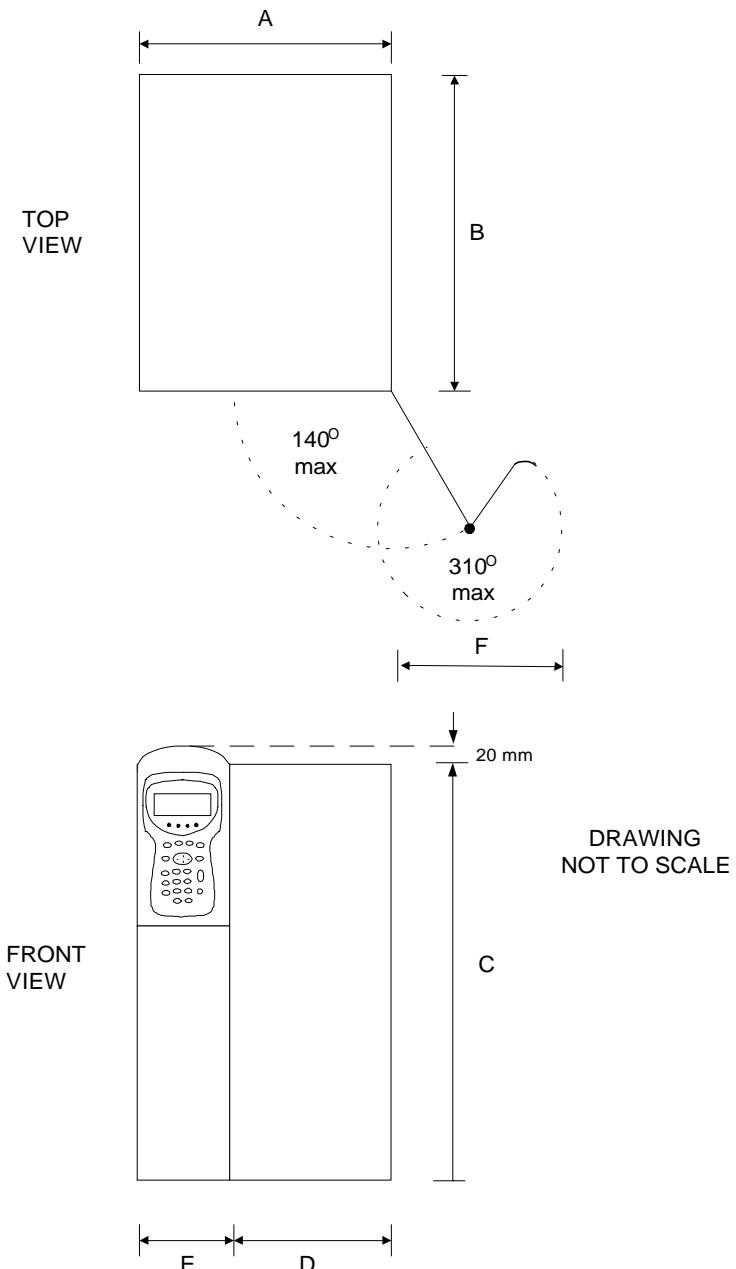

For accurate speed control, a resolution not less than 1024 pulse/revolution is suggested.

The drive will allow a maximum of 64,000 pulse/revolution, however since the frequency of pulses is affected by the maximum motor speed, the frequency of pulses must not exceed 1.5 MHz. Therefore the encoder resolution must not exceed:

$$\frac{90 \times 10^6}{\text{Required top speed (r/min)}} \text{ Pulses per revolution}$$

5. Technical Data

5.1 Weights & Dimensions – MicroCubicle™

MicroCubicle™ physical dimensions

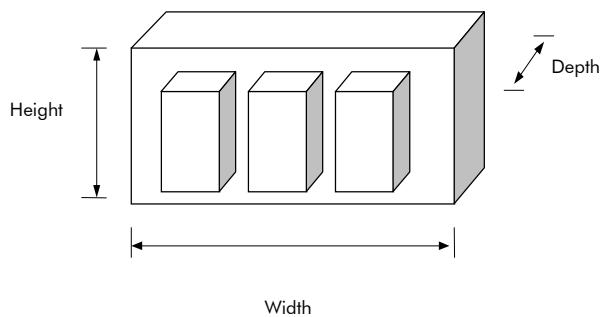

Frame Size*	Dimensions mm (in)						Weight Kg (lb)
	A	B	C	D	E	F (max)

MV3FLT320A6X1	386/15.2	260/10.2	115/4.5	10.5/23.1
MV3FLT400A5X1	386/15.2	260/10.2	115/4.5	10.5/23.1

5.9 Weights & Dimensions – EMC Ferrites

<p>Part No: MV3FLT140B6A1</p> <p>Weight: 0.91 kg / 2 lb</p>	
<p>Part No: MV3FLT566B6A1</p> <p>Weight: 5.11 kg / 11.24 lb</p>	

5.10 Acoustic Noise Levels – MicroCubicle™

Acoustic noise levels

Frame Size*	Maximum noise level 1.0 m (39.4 in) in any direction from drive
	dBA
3	63
4	66
6	76
7	80

* Please refer to Section 2.2 Rating and Protection Data for correspondences between Frame Size and actual MicroCubicle™ unit.

(This page intentionally left blank)

6. Recommended Spares List

6.1 MicroCubicle™ Spares

The following spares are available for ALSPA MV3000 MicroCubicles. Spares for DELTA based inverters comprise complete module replacement. Please refer to the **ALSPA MV3000 DELTA Buyer's Guide** for details.

MicroCubicle	F r a m e	Control Module	Fan	Rectifier Module	Transistor - Transistor Module	Rectifier- Transistor Module	SMPS (Switch Mode Power Supply)	Precharge Fuses (3 off Req'd)

6.2 Precharge Fuses

Data for precharge fuses is shown below. The data is given here in addition to the part numbers shown in Section 6.1 to allow local purchase of fuses, which may be helpful during commissioning. Replacing these fuses with another rating or type will invalidate safety approvals.

Frame size	Fuse rating A	Fuse type (Qty. 3)
400 V		
3	2	Bussmann KTK-2
4	4	Bussmann KTK-4
6	6	Bussmann KTK-6
7	6	Bussmann KTK-6
480 V		
3	2	Littelfuse KLKD002.T
4	3	Bussmann KTK-3
6	3	Bussmann KTK-3
7	5	Bussmann KTK-5
600/690 V		
4	3	Bussmann KTK-3
6	4	Bussmann KTK-4
7	5	Bussmann KTK-5

7. Fax Enquiry Form

Should you have any problems selecting your ALSPA MV3000 or options, please fill in as many questions as possible in the following form and fax it to your local ALSTOM Power Conversion Sales Office or Representative.

If you consider that the any of the items are not applicable, just leave them blank.

We will be able to determine the drive type and any necessary options from the information that you provide. However, if there is any other information you consider relevant, or know that you may need a particular option, please add this information in the space at the bottom of the form or add further sheets as necessary.

ALSPA MV3000 - FAX ENQUIRY FORM

To: _____ Fax: _____ Page 1 of _____

From: Name / Position			
Company			
Company Address			
Phone:	Fax:	Email Address:	

AC Induction Motor Nameplate Details		• Motor Base Speed	rpm
• Motor Power	kW/HP	• Motor FLC Amps	A
• Motor Volts	V	• Motor Base Frequency	Hz
• Power Factor		• Cable Length	m

Mains Network Supply Details			
• Supply Voltage	V AC	• Supply Frequency	Hz

Application		• Maximum speed of application	rpm
• Centrifugal Pump or Fan?	Yes/No	• Duty Cycle (Add diagram)	
If No: describe		• Requirement for low speed running	Yes/No
• Overload Magnitude/Duration	% / sec	• Encoder Line Count	ppr

Environmental Details			
• Is the drive installed in a normal industrial environment?	Yes/No		
- If No: describe			

Ambient Conditions			
• Maximum Ambient Temperature	• Altitude		
• Air Quality e.g. contaminants, humidity	• Acoustic Noise Limit	dBA @ 1m	

Driven or overhauling load?			
• Is the motor linked to any other driven machinery, or does it hold the load against gravity?	Yes/No		
- If yes, details required:			
• Does the slow down or stop time matter?	Yes/No		
- If yes, what ramp time or rate required :		- What is the load inertia:	
• Is precise speed control required, e.g. speed matching?	If yes, to what accuracy?		

Supply Harmonics			
• Specify if supply harmonics of concern?			
• Is the total load of existing inverters more than 50% of the LV supply feeder?			

Communication Requirements			
• Is there a Serial Communication or Fieldbus link?		If yes, Protocol:	

Other Requirements			
Please list any other information, which you may consider relevant. Add further sheets as necessary.
